Grade Standard - A Grade
Packaging Type - Truck

DEALS IN ROAD MATERIAL

A wide variety of materials are used in the construction of roads these are soils (naturally occurring or processed), aggregates (fine aggregates or coarse aggregates obtained from rocks), binders like lime, bituminous materials, and cement, and miscellaneous materials used as admixtures for improved performance of.

AGGREGATE

The aggregate gives volume, stability, resistance to wear or erosion, and other desired physical properties to the finished product. Commonly used aggregates include sand, crushed or broken stone, gravel (pebbles), broken blast-furnace slag, boiler ashes (clinkers), burned shale, and burned clay.

CONSTRUCTION MATERIAL

The construction materials list includes cement, steel, sand, concrete, ready-mix concrete, binding wires, aggregates, bricks, blocks, etc. apart from these, various eco-friendly construction materials are also used in building construction.

CONSTRUCTION WITH MATERIAL

The most common materials are concrete, wood, metal, and stone. Concrete is a mixture of cement, water, and aggregate (sand and gravel). It is widely used for foundations, walls, floors, and driveways. Wood is also a popular construction material.

PAINTING WORK

Painter responsibilities include: · Reading blueprints/instructions and examining surfaces to determine the kind and amount of work necessary.

EARTH MOVERS

A machine (such as a bulldozer) for excavating, pushing, or transporting large quantities of earth (as in roadbuilding)
